

The Winning Force

DURMA

HRB SERIES

Plate Roll Bending

MRB & MRB-S SERIES

Motorised Plate Roll Bending

- Strong
- Precise
- Efficient
- Fast
- High Repeatability

DURMA The Winning Force

As a total supplier for sheet metal manufacturing with almost 60 years of experience, Durma understands and recognizes the challenges, requirements and expectations of the industry. We strive to satisfy the ever higher demands of our customers by continuously improving our products and processes while researching and implementing the latest technologies.

In our three production plants with a total of 150.000 m², we dedicate 1,000 employees to delivering high quality manufacturing solutions at the best performance-to-price ratio in the market.

From the innovations developed at our Research & Development Center to the technical support given by our worldwide distributors, we all have one common mission: to be your preferred partner.

Present Durmazlar machines with **DURMA** name to the world.

HRB-4 Series Plate Rolls

“Fast, Accurate and Easy to Operate”

Four plate rolls are more precise, productive, versatile, faster, safer and easier to operate than three roll machines. They are less dependent on operator competence. Ideal for bending plates up to 200 mm thick.

Fast and Reliable

Efficient Cycle Times

User Friendly, Easy to Operate

Increased Productivity

Up to 200 mm Bending Thickness

Finest Bending Performance

“Durma always strives to be your preferred partner”

Robust machine body and construction ensure long machine life and low maintenance. High torque drive system allows HRB to achieve shorter cycle times. User friendly control units makes it possible to be less dependant on operator competence.

General Specifications

- Up to 8000 mm Bending Lengths
- Up to 200 mm Bending Thickness
- Accurate, Easy to Operate, Fast and Reliable
- Flat zone of the part is minimized
- Pre-bending, conical bending and ellipse bending can be done easily
- Double pre-bends (both ends) in one pass
- The sheet reference is maintained by tightening of top and bottom rolls
- Most desirable bending operation for CNC applications
- More efficient for cycle times
- Hydraulic and electrical systems have been safeguarded from overloading and require minimum maintenance.
- Hydraulic and electrical components are modular and designed according to world standards

HRB Series Standard Features

Robust Body Structure

Machine's body is strengthened and lowered to minimise the twists and deformation. Machine body, frame and steel bar connections are stress relieved after the welding operation.

Planetary Swing Rolls System

Side rolls are guided by swing beds which allows them to act as 2 independent axes moving on curve shape orbits. Side rolls are approaches to the top roll on curve movement which allows to get perfect prebendings as well as spring back minimisation. (Rectilinear Rolls System designed for top roll dia more than 460 mm)

High Torque Drive System

High Torque Drive System enables Durma roller bending machines to bend metal sheets with less steps. HRB-4 machines has top and bottom rolls powered by planetary reducer, hydraulic motor and gear system. HRB-3 machines has top and side rolls powered by planetary reducer, hydraulic motor and gear system. Strong Hydraulic Brake system does not allow the sheet to slip back. Pressure safety valves are protecting the hydromotor and other components from overloads and peak pressures.

Hydraulic Opening

Hydraulic opening drop-end for easy remove completed the bending.

HRB Series Standard Features

Conical Bending System

Strong body and angular bottom and side rolls enables to easily conical bend materials. While machile machines in the market bends conical 3 times of top roll diameter, Durma HRB machines can bend 1.5 times easily.

Synchronized Rolls System

Side rolls triggered by 4 different strong hydraulic cylinders. Synchronisation between Thanks to high precision load holding valves. Bottom roll tightens different thickness of sheets without deformation and taking to the consideration of its paralelism by hydraulic adjustable pressure torsion bar.

Hardened Rolls And Crowning System

Highly durable carbon steel (C45) rolls are machined by CNC Lathes with high precision without creating notch effect. Working surfaces of the rolls are induction hardened to HRC 54±2. Rolls are machined as crowning shape to compansate the deflections on the rolls during the bending.

Strengthen Bearing System

Rolls are guided with spherical roller bearings and bronze housings. Guiding system requires less lubrication and keeps it precision in long term.

Hydraulic System

Rolls are positioned by hydraulic components. The precision of axes are maintained through the use of Bosch Rexroth valves. Pressure safety valves protect against peak pressu- res and overloads.

Electrical and Electronic System

Electrical system is designed compatible with CE safety regulations. The system consists of well known electrical components. The system is protected by current overloa- dings for its components, power supplies and motors.

User Friendly Control Unit

The standard control unit ensures that machine's bottom and side rollers operate smoothly.

User Friendly Control Unit HRB-3

User Friendly Control Unit HRB-4

HRB Series Optional Features

NC Control Unit (HRB-4)

In addition to standard user friendly control unit, all bending steps are recorded for operator in teaching mode. All recorded movements can be repeated using automatic mode. NC control system has capacity to save 70 programs up to 100 steps each.

CNC Control Unit (HRB-4)

CNC control unit features a graphical control system that enables the operator to realize the bending step by step or automatically calculate bending process. It includes a bending library that features polysentric and ellipse bending shapes.

Vertical and Side Support System

Optional hydraulic side and vertical supports the sheet's stretch and prevent deterioration of the bending form in big shaped bending.

Moveable gauges with hydraulic double cylinders are produced from St52 steel construction. Sheet is easy sliding movement on supports by support rollers which is housing by bearings.

Each support can be controlling from control panel separately. It is possible to vertical support's capacity is to provide $\varnothing$ 2000 mm to $\varnothing$ 6000mm sheet and 4 ton to 6 ton capacities. Vertical and side support system can be controlling automatically NC mod in CNC and NC machines.

Especially the during bendings of the large diameter and thin metarial ellipse, paralel corners and polycentric shaped may effect the precisions and can cause deformation of the metarial, when there is not enough support

from the standard sheet support systems the double knuckle side support system may interfere and provides a pricise and perfect bendings, if needd the sizes of these support can be build according to the customers request.

HRB Series Special Features

Full automatic bending line with loading and unloading

Anguler Material Feeding System

Wind tower bending line

Material Feeding and Lip Alignment System

With the long and large sizes of metal sheets there may always have difficulties to providing the accuracy, placing and keeping the control of the product. Robust Bearing and housing bearing will provide smooth movement towards the machine, motorized or manual feeding tables also ensures the reduction of time and easy process. Opposite hydraulic cylinders will provide correctioning and will also help with the straightness or if needed conical bendings can be adjusted.

Special solution for corrugated sheet

Automatic Sheet Extraction System

Standard & Optional Equipment

Standard Equipments

- PLC control system
- Adjustable turning speed
- Conical bending
- Induction hardened rolls
- Stress relieved steel construction body
- High tensile carbon steel rolls
- Sealed spherical roller bearings
- 2 rolls drive system (Upper roll Ø 200 mm - Ø 460 mm)
- 4 rolls drive system (Upper roll > Ø 460 mm)
- Fixed top roll (Upper roll Ø 200 mm - Ø 460 mm)
- Hydraulic opening cover
- Welding possibility on the machine
- Electronic synchronized rolls
- Mechanical synchronized bottom rolls
- Adjustable pinching pressure
- Overload protection
- Safety wire around the machine and emergency stop button on control panel
- Manual lubrication
- User manual
- CE

Optional Equipments

- NC Control Unit
- CNC Control Unit
- Polished rolls
- Hydraulic vertical support preparation (Full / Mechanical)
- Hydraulic vertical support
- Side support preparation (Full / Mechanical)
- Hydraulic side supports
- Hydraulic side supports with double joint
- NC included side and vertical supports
- Interchangable top roll
- Oil cooling
- Oil heating
- Automatic centralized lubrication system
- Plate feeding platform with alignment unit
- Special plate support systems
- Loading, unloading systems
- Seperate power cabinet
- Special solutions for wind tower projects

HRB-3 Series Plate Rolls

“Fast, Accurate and Easy to Operate”

Hydraulics Plate 3-Roll Bending Machine
Flexibility of 3 roll for medium sizes by Durma technology
Prebending of both the leading and trailing edge

- Flexible machine for meditum to thick material
- Cost effective solutions for large diameters
- Wide working range
- Excellent for rolling cones
- Great value for precision and reliability
- All rolls are driven with superior torque and speed

- Standard Equipments**
- PLC control system
 - Conical bending
 - Induction hardened rolls
 - Stress relieved steel construction body
 - High tensile carbon steel rolls
 - Sealed spherical roller bearings
 - 3 rolls drive system
 - Fixed top roll and hydraulic opening cover
 - Welding possibility on the machine
 - Electronic synchronized rolls
 - Overload protection
 - Safety wire around the machine and emergency stop button on control panel
 - Manual lubrication
 - User manual
 - CE

Standard Equipment

- CE
- Conical bending
- Motorised back roll
- Top & Bottom rolls gear drriven
- Pendant command panel
- SAE 1050 steel rools
- Induction hardened rolls
- Stress relieved steel construction
- Support on 2,5 and 3 m machines
- Brake system for precise bendings

Optional Equipment

- Digital readout
- Motorised bottom roll tightening
- Ground rolls
- Roll extention for profile bending
- Special rolls for profile bending
- Special packing for overseas shipments

Vertrauen Sie auf über 70 Jahre Erfahrung!

Die Firma HESSE+CO wurde 1947 als Hersteller von Blechbearbeitungsmaschinen gegründet. Seit 1980 sind wir auf den Handel mit neuen sowie gebrauchten Blechbearbeitungs- und Werkzeugmaschinen spezialisiert. Wir haben ständig etwa 300 Maschinen in unserer 2.000 m² großen Ausstellungshalle, die nur 20 Minuten vom internationalen Flughafen Wien entfernt ist.

Trust in more than 70 years of experience!

HESSE+CO was established in 1947 as a manufacturer of sheet metal working machines. Since 1980 we are specialized in dealing with new and second hand sheet metal processing machines and machine tools. We always have approximately 300 machines available in our 2.000 m² showroom, which is located only 20 minutes from the Vienna International Airport, waiting for your inspection.
